

VINCENT SOTOYA

Full-Stack Software Engineer

+63 906 281 4690 | vincentstotoya20@gmail.com | [linkedin.com/in/vincent-sotoya](https://www.linkedin.com/in/vincent-sotoya) | github.com/vincentstotoya | Fukui, Japan

SUMMARY

Full-stack software engineer with 3+ years across enterprise Java/Vue.js development and Japanese insurance systems, including direct on-site deployment in Japan. Transitioned from another career via an intensive full-stack bootcamp, then progressed through enterprise application development, Waterfall SDLC delivery, and specification-driven Java engineering. Comfortable working from Japanese-language technical specifications and translating them into tested, production-ready code.

TECHNICAL SKILLS

Languages & Frameworks: Java, JavaScript, Vue.js, React, Node.js, Express.js

Testing: JUnit, Vitest, Program/Unit Testing (PT), Integration Testing (IT)

Databases: MongoDB

Methodologies: Waterfall SDLC, specification-driven development, reusable/shared component integration, frontend-backend data flow

Domain & Environment: Japanese insurance systems, Japanese-language technical documentation, on-site Japanese enterprise engineering teams

PROFESSIONAL EXPERIENCE

Software Engineer — TenseiDataNet — Fukui, Japan

May 2025 – Present

Deployed on-site to Japan; assigned to a Fujitsu-led Japanese life insurance system project

- Modified UI design/specification documents and system/design specifications (UI/SS) per change requirements, investigating existing specs before implementation.
- Implemented and modified Java programs against approved design documents, working across interconnected components including input/output DTOs and report-generation functionality.
- Created and executed JUnit test cases, achieving 100% coverage for assigned components where required; performed program testing (PT) and supported integration testing (IT).
- Investigated discrepancies between specifications, program behavior, and test data, including creating/modifying XML test data.
- Traced insurance business rule changes across the full pipeline — design specs → DTOs → business processing → output → generated documents.

Software Engineer — Tensei Philippines — Philippines

Oct 2024 – May 2025

Japanese insurance system project, structured Waterfall SDLC

- Performed program implementation and modification (PG 作成/PG 修正) from approved specifications, including functional change point (FCP) updates.
- Created and revised program/unit test specifications (PT 設計書作成/修正) to align coverage with updated program logic.
- Executed program/unit testing (PT) and investigated discrepancies between specifications, implementation, and test outcomes.
- Worked from Japanese-language design and functional change specifications throughout the implementation and testing lifecycle.

Software Engineer — IBM Philippines — Quezon City, Philippines

Oct 2023 – Oct 2024

Enterprise Japanese insurance system, structured Waterfall SDLC

- Developed frontend (Vue.js) and backend (Java) functionality for an enterprise Japanese insurance system, working from Japanese-language design specifications.
- Integrated and configured reusable/shared UI components per screen specifications, implementing screen-specific behavior, event handling, and data initialization.
- Implemented frontend-to-backend data flow, managing data transfer between components and screens to support enterprise application workflows.
- Wrote and executed unit tests (JUnit, Vitest) and resolved defects found during implementation and testing.

EDUCATION

Bachelor of Science in Business Administration, Major in Export Management

2018 – 2022

De La Salle College of Saint Benilde

ADDITIONAL TRAINING

Full-Stack Software Development Bootcamp — Career Shifter — Online

~3 months

- Intensive full-time program (MERN stack: MongoDB, Express.js, React, Node.js); built multiple frontend, backend, and full-stack projects with REST API integration prior to entering professional software engineering.
